

# REGISTRATION MAP

To access the State Declarations Portal (SDP), users must complete the registration process by following the steps listed below, along with the detailed guidelines in the referenced SDP Start Guide.

**1** Create a **NUCLEUS account** with your official email by going to <https://nucleus.iaea.org> and clicking on the 'Register' link located at the top-right of the page.

**2** Email your **NUCLEUS username and token serial number** (found on the back of the token) to [SDP-Contact-Point@iaea.org](mailto:SDP-Contact-Point@iaea.org)

**3** The **IAEA will contact you** when your token has been activated. Upon this, set your token PIN by following section 3 of the SDP Start Guide.

**4** Install the **open-source encryption software, Gpg4win**. Detailed guidance on the installation can be found in section 4.

*If you already have the software tool installed (whether it is Gpg4win or any other OpenPGP compliant software), please skip this step.*

**5** Generate your **certificate (key pair)**, using the PC where the encryption/decryption software tool has been installed. See more details in section 5.

**6** Email the **public certificate** as a file attachment to the SDP Contact Point along with the corresponding **NUCLEUS username and token serial number**.

**7** Fill in and send the **registration form** to the IAEA. See section 7 for more details.

**8** Your **registration is complete**. The IAEA will confirm SDP access via email.
