

R2D2P WORKING GROUP REPORT

Clédola Cassia Oliveira de Tello (Brazil),

Farouk Abdel-Rahman (Egypt),

Ibrahim Muhamad (Malaysia),

Milan Vujovic (Serbia),

Quang Huy Pham (Vietnam)

Positive observations (1)

- Electric wire checked before cutting – working safety
- Area cleaned of dust and rubble; radiation survey performed after dismantling
- On site waste segregation
- Well planned sequences of dismantling
- Work in pairs (in case of injury etc.)
- Spare gloves and decontamination kits in place in reactor hall
- Fire-protection equipment is properly checked
- Dosimeter control even when not working in contaminated area (for both genders)

Positive observations (2)

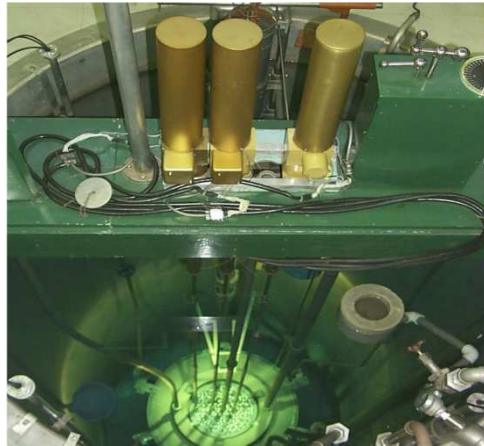

- Any worker and RPO have enough power to stop any activity which they think is not safe enough
- General working conditions in reactor hall are good, there is enough space and light and proper equipment is available; exit is properly labeled with illuminated sign
- A vacuum cleaner is used for preventing spread of possibly contaminated dust
- Smear tests were taken after cutting
- After cutting ends of pipes were sealed with adhesive tape which was also done with the vacuum cleaner to prevent possible spreading of contamination

Improvement observations:

- Every worker should wear respiratory mask prepared (not necessary on his mouth)
- Every worker should be checked before entering the work area for protective equipment, even if they do not work (like supervisors)
- In case that all workers are prevented from notifying about emergency, an external alarm should be installed
- A lead cask is placed in a location where it might interfere with moving through reactor hall
- Insufficient light on gamma deck
- Tools and other things used in or found during dismantling activities should be checked for contamination

What would we do differently in our countries?

- Every reactor is a story for itself...

What would we do differently in our countries?

- ... far more important is seeing how things were done in UB and to have new ideas now on how to do things in our countries
