Progress with Indonesian SMR project

16 March 2018

Share

Indonesia's National Atomic Energy Agency (Batan) has launched a roadmap for developing a detailed engineering design for its Experimental Power Reactor (*Reaktor Daya Eksperimental*, RDE). The design of the country's indigenous small modular reactor is expected to be finalised later this year.

Indonesia and IAEA strengthen cooperation

06 February 2018

Share

The International Atomic Energy Agency (IAEA) and Indonesia signed a practical arrangement yesterday to promote nuclear science and technology, and to strengthen technical cooperation among developing countries.

BACKGROUND

BATAN: National Nuclear Energy Agency - INDONESIA
Established since 1958.

Radioisotopes

Materials Research

Nuclear Fuel Test

3 Research Reactors in Indonesia

TRIGA 2000 Reactor

- Location: Bandung, West Java
- Type: TRIGA reactor
- Thermal power: 2000 kW
- First critical at **1964** (250 kW)

Kartini Reactor

- Location: Yogyakarta (Central Java)
- Type: TRIGA reactor
- Thermal power: 100 kW
- First critical at **1979**

G.A. Siwabessy MPR

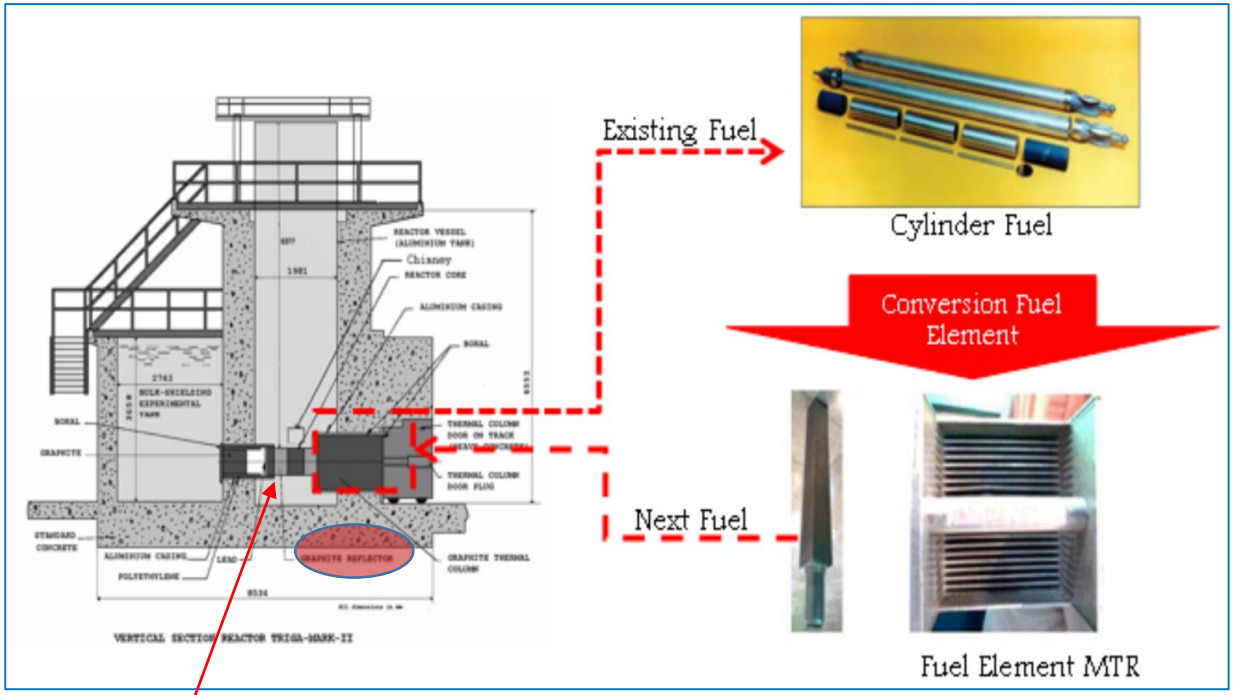

- Location: Serpong, (Banten)
- Type: Multi Purpose Reactor
- Thermal power: 30 MW
- First critical at **1987**

BACKGROUND

G.A. Siwabessy MPR

- Location: Serpong, (Banten)
- Type: Multi Purpose Reactor
- Thermal power: 30 MW
- First critical at **1987**

XHR - *Experimental Hall Reactor* & NGH - *Neutron Guide Hall*

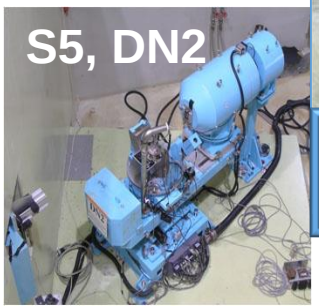

BACKGROUND

Lattice and spin dynamics (Atomic scale ~ A)

Materials characterization from atomic to macro (Angstrom to mm) scales

Structure, inhomogenity (micro scale:~ μm)

Pores, cracks (macro scale:~ mm)

Elemental analysis

Crystal structure (atomic scale: ~

Structure, Inhomogenity (nano scale:~ nm)

Neutron Radiography/ Tomography

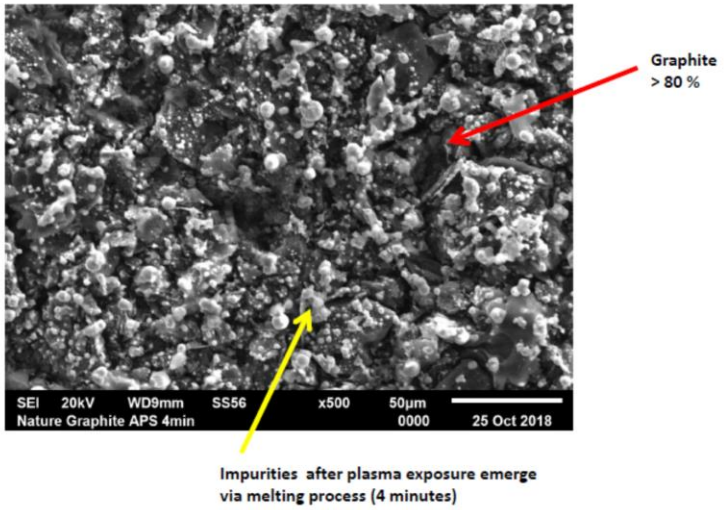

Neutron Activation Analysis

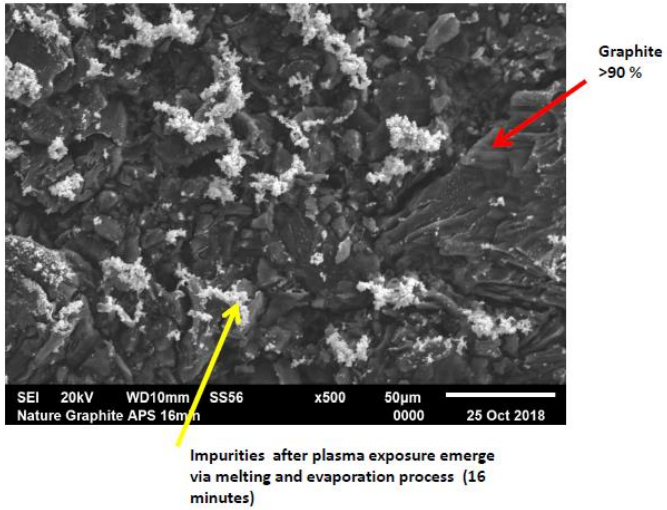

Neutron Diffractometer

Neutron Spectrometer

RECENT ACTIVITIES

- Oxidation Investigation of Graphite IG-110 and IG-11 At High Temperature
  Abu Khalid Rivai *et al*
- The Potential of Indonesian Natural Graphite as EPR / *RDE* Fuel Matrix
  Deni Mustika *et al*
- Purification of Indonesian Natural Graphite BY Arc Plasma Technique
  Arbi Dimyati *et al*

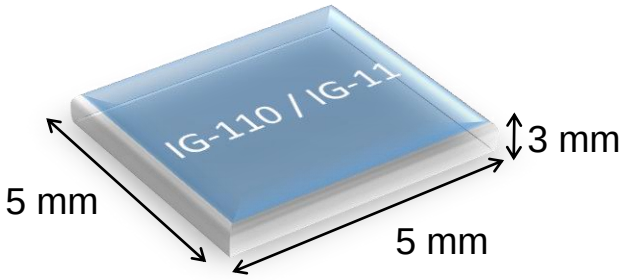

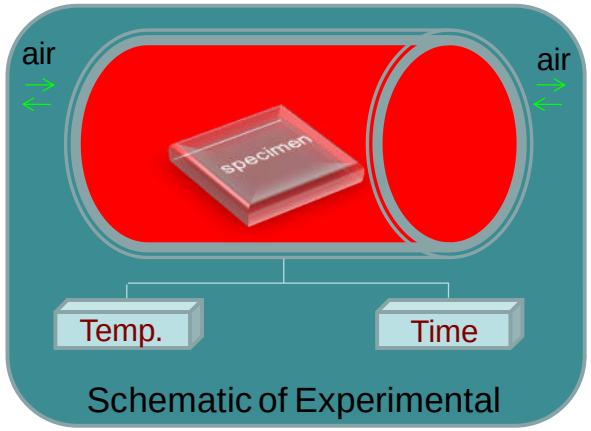

RECENT ACTIVITIES

Oxidation Investigation of IG-110 and IG-11 At High Temperature (Preliminary Study)

Parameter	Conditions
Specimen material	**Graphite IG-110 and IG-11**
Temperature of treatment (ºC)	600 (air), 800 (vacuum & air)
Type of environment	Air (100%) and Vacuum (~344 mTorr)
Time of testing	240 minutes

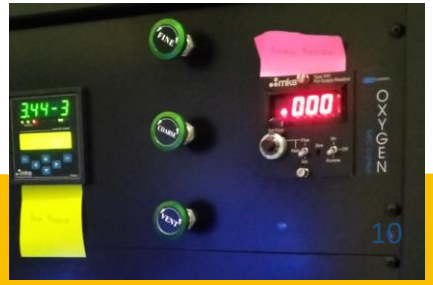

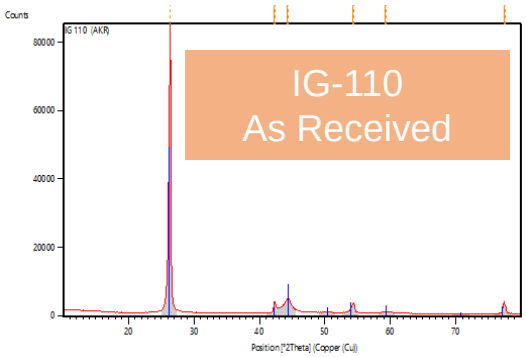

Schematic of Experimental

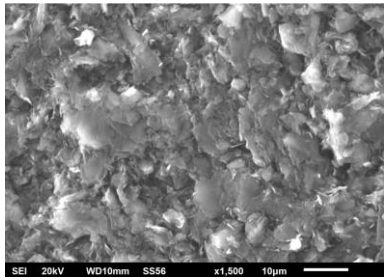

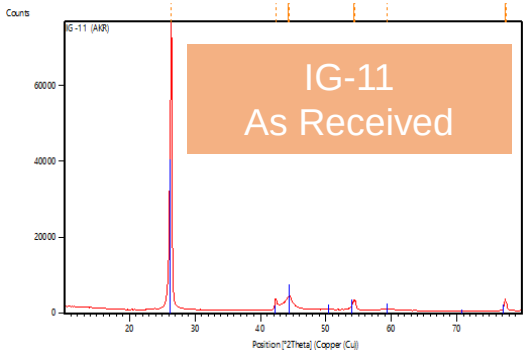

Vacuum

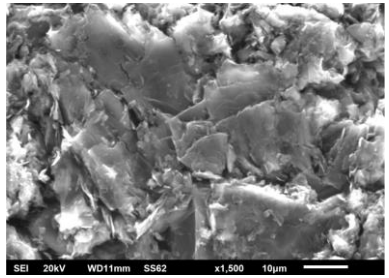

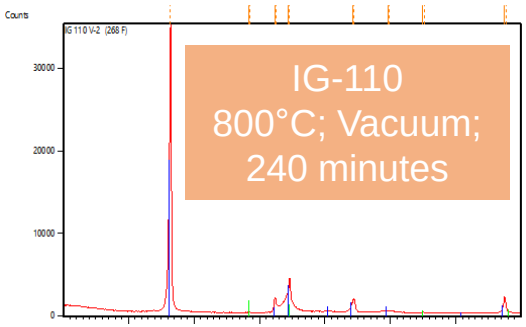

RECENT ACTIVITIES

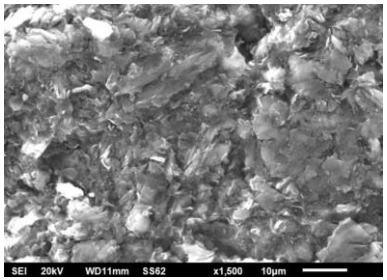

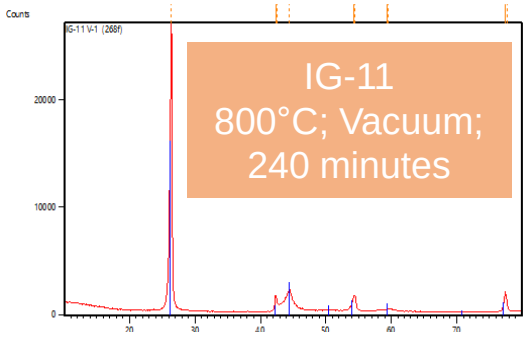

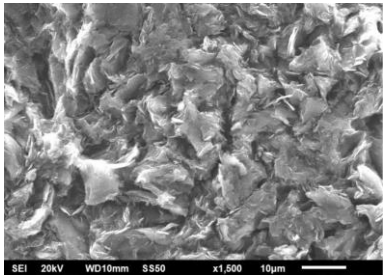

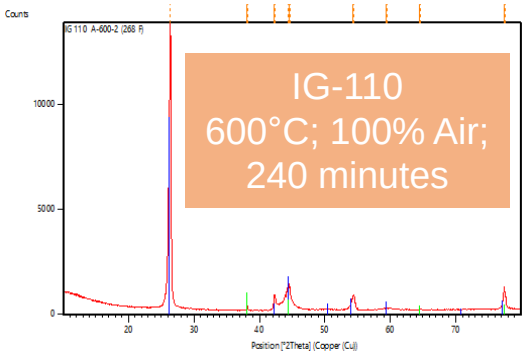

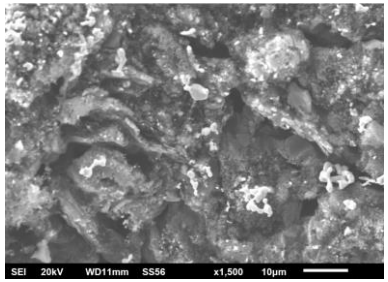

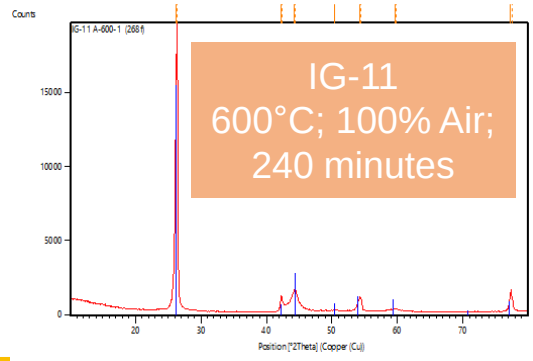

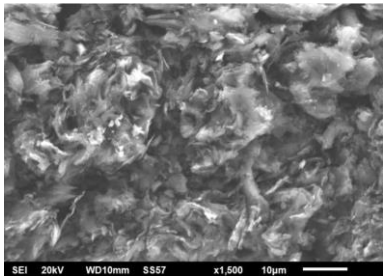

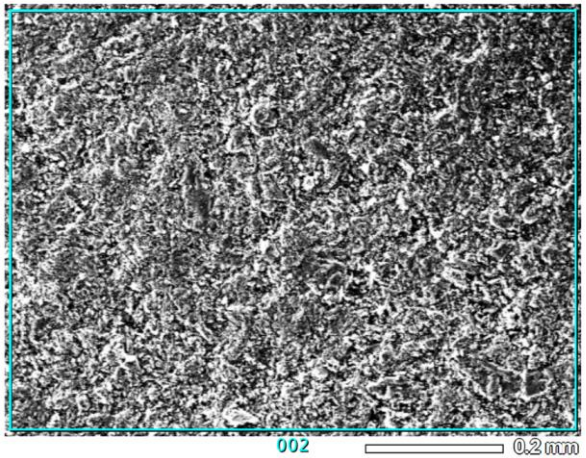

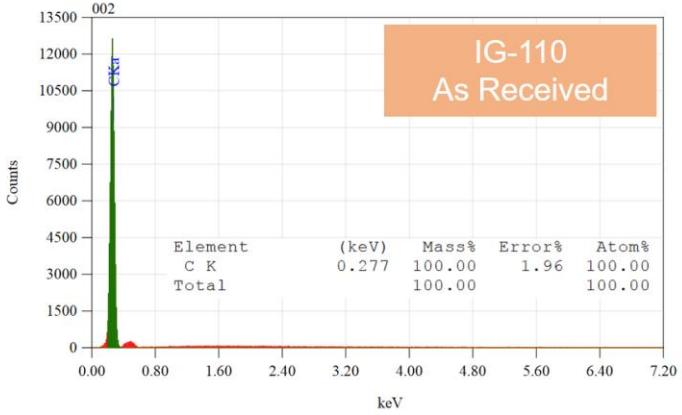

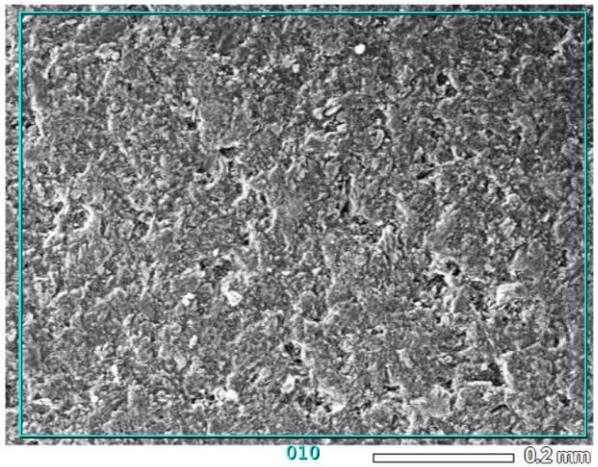

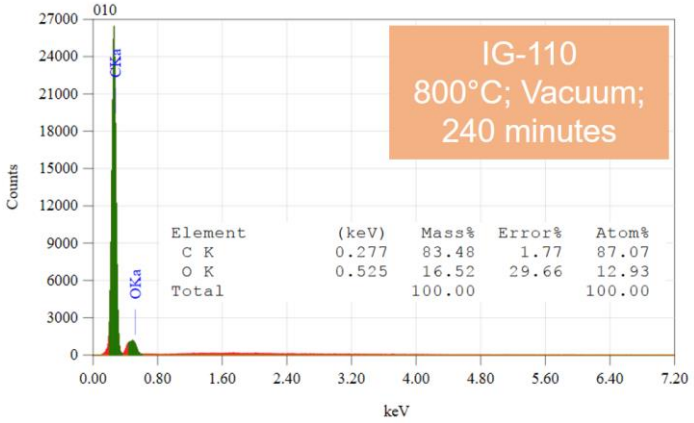

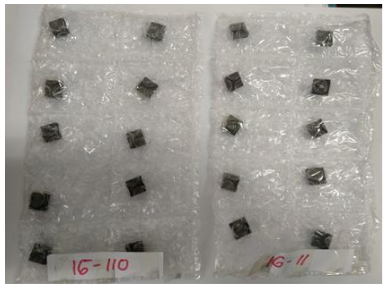

RECENT ACTIVITIES

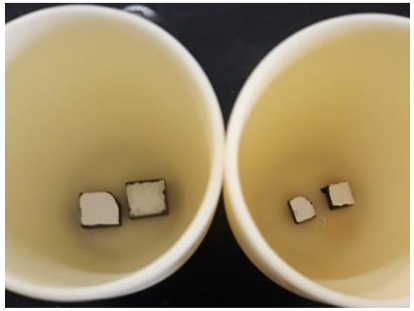

Before

After

600°C; 100% Air;
240 minutes

FUTURE WORKS & PROPOSED ACTIVITIES

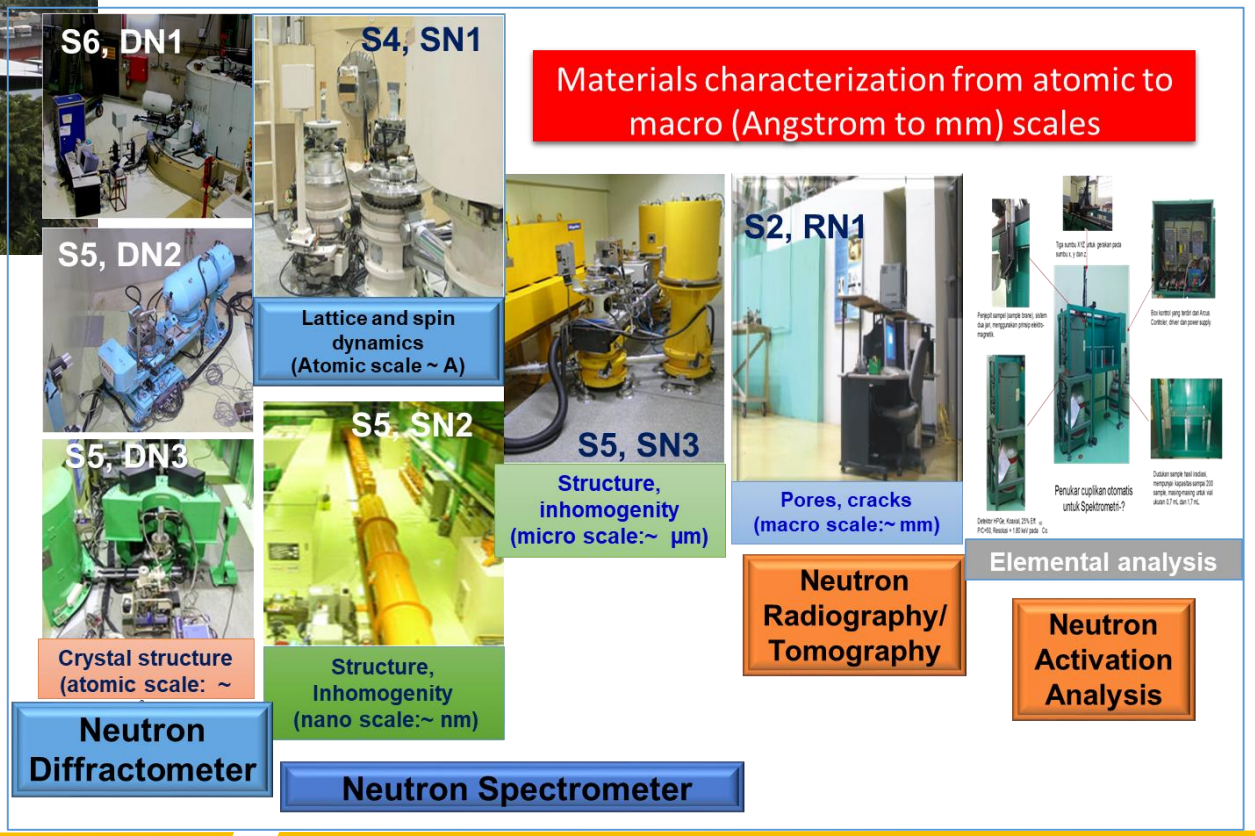

- Utilization of Neutron Scattering Technique (BATAN's Facilities) For Graphite R&D.
- Further Investigation of Graphite IG-110 and IG-11.
- R&D of Graphite For Nuclear Fuel Matrix and Nuclear Reactor Structures/Reflector Materials, Including Utilization of Arc Plasma System.

FUTURE WORKS & PROPOSED ACTIVITIES

We are Welcome All of You To Utilize Our **Neutron Scattering Facilities** for Nuclear Graphite Research

Welcome for International Research Collaboration

THANK YOU

danke schön
