DIFERENTIATION BETWEEN
BACTROCERA DORSALIS & BACTROCERA ZONATA

Both are large brownish flies with long antennae, yellowish legs and largely transparent wings. They resemble wasps.

**B. dorsalis**
- Dark band along margin complete (circled in red)
- Dark anal streak present (red arrow)
- Abdomen with 'T' shaped pattern

**B. zonata**
- Dark band reduced to spot at beginning and end (circled in red)
- Dark anal streak absent (red arrow)
- Abdomen without 'T' shaped pattern

**Major differences**

**Minor differences**

**B. dorsalis**
- Thorax colour variable but at least partly black
- Wing: cell br with small hairs

**B. zonata**
- Thorax colour completely brown
- Wing: cell br without small hairs, transparent
