KNOWLEDGE IN ACTION

# NORM Residue management

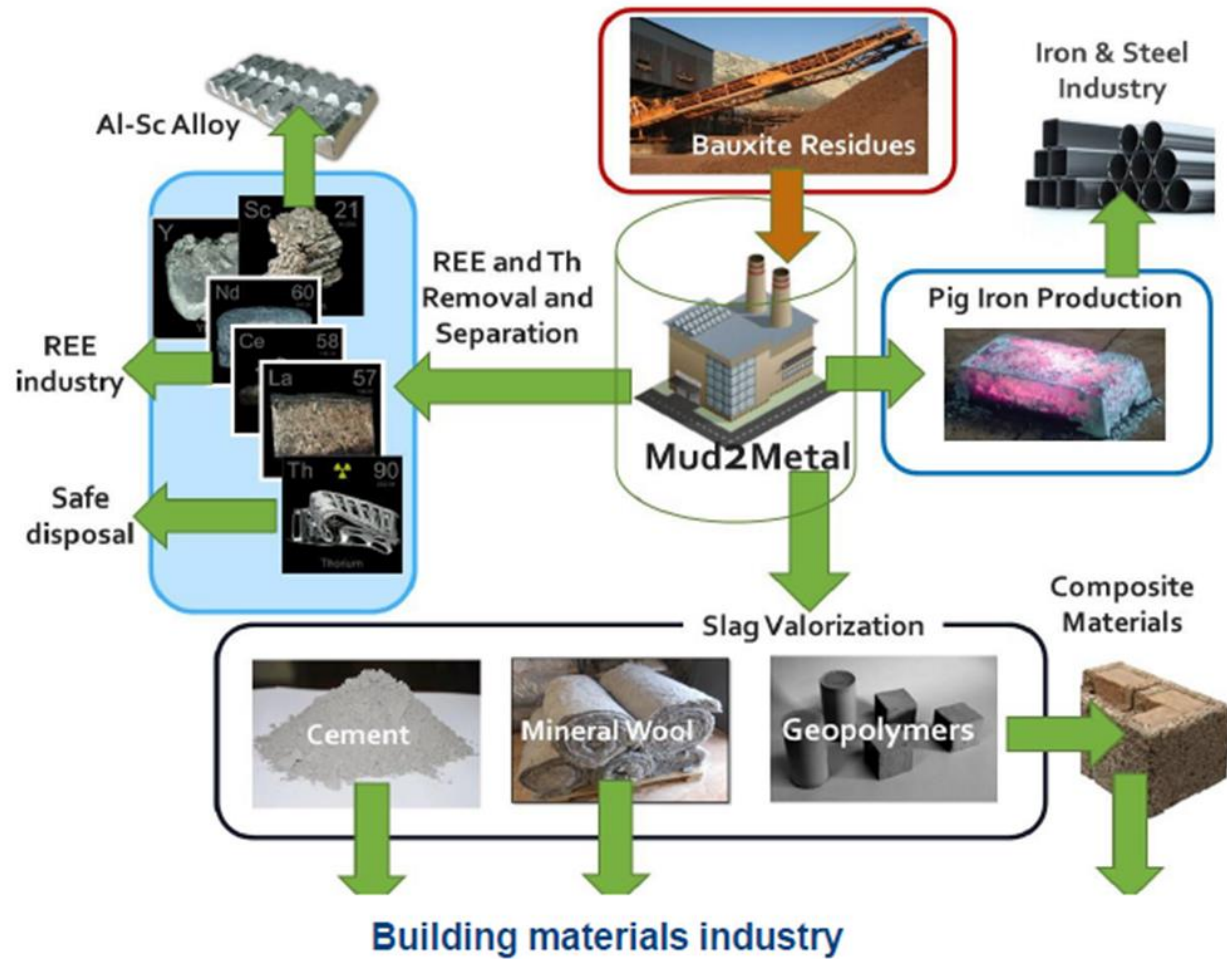

Considering industrial symbiosis between **local** partners

Embrace the local differences: **different materials → different solutions**

**Quality of / trust in the product** comes first

Recycling

# Recycling + recovery

- Preference to integrate recycling of residues in existing processes
- If needed design your own process

## Controversial idea for discussion

- In-situ leaching approach to improve properties of residues on a mono-landfill? Safety aspects? Environmental impact
