Gross alpha and gross beta radioactivity determination in Rocha’s coastal groundwater

Azcune, Germán; Fornaro, Laura
Grupo de Desarrollo de Materiales y Estudios Ambientales, Centro Universitario Regional del Este, Universidad de la República, Rocha, Uruguay
OBJECTIVES AND METHODOLOGY

• Gross alpha and gross beta Rocha’s coastal groundwater preliminary screening to determine whether further radioisotope-specific analysis is necessary.

• Identify spatial trend in radionuclide content.
SUMMARY OF RESULTS

All activity concentrations were below the limits required both in Uruguayan and International regulations for drinking water.
